Project Demo Planning

Date	21 October 2026
Team ID	TDS-AI-2026
Project Name	Personalized Travel Itinerary Planner
Maximum Marks	3 Marks

Project Title

Personalized Travel Itinerary Planner

Demo Overview

The project demonstration covers the full user workflow from registration to itinerary customization, showcasing all AI-powered and manual features of the application.

Demo Script

Part 1: Application Introduction (2 minutes)

- Show the live URL: https://personalized-travel-itenerary-planner-ob42m5s4v-tanay-e4be.vercel.app/
- Describe the scenic login page with the travel-themed background
- Explain the problem being solved and the tech stack being used
- Show the GitHub repository: https://github.com/Tanay-Ds/Personalized-Travel-Itenerary-Planner

Part 2: User Registration & Authentication (2 minutes)

- Navigate to the Signup page
- Create a new user account with email, password, and display name
- Show how Supabase Auth handles the registration
- Demonstrate successful redirect to the dashboard after login
- Explain JWT-based session management and Row-Level Security

Part 3: AI Itinerary Generation (5 minutes)

- Click "New trip" on the dashboard
- Fill in trip details:
- Destination: Jaipur, India
- Dates: 3-day trip
- Budget: 15000 INR
- Group size: 2
- Travel style: Balanced
- Interests: history, food, architecture
- Click "Generate itinerary" and show the loading spinner
- Explain the AI generation process:
- Backend builds a detailed prompt with all user inputs
- Sends to Google Gemini API (primary LLM)
- Validates JSON response with Pydantic schemas

- Saves trip, days, and activities to Supabase
- Show the complete itinerary when it loads (10-30 seconds)

Part 4: Itinerary Exploration (3 minutes)

- Navigate between days using the day selector buttons
- Show activity cards with type, time range, location, description, and cost
- Point out per-day cost and total trip cost vs. budget
- Show the day summary text generated by AI
- Demonstrate responsive layout on mobile size

Part 5: Customization Features (5 minutes)

- **Edit Activity**: Click Edit on an activity, modify the description and cost, save
- **Delete Activity**: Delete one activity from a day with confirmation
- **Drag-and-Drop Reorder**: Drag an activity to a new position in the list
- **Day Regeneration**: Click "Regenerate day" on Day 2, confirm, wait for new AI plan
- Show that other days are unaffected while only Day 2 changes

Part 6: API Documentation (2 minutes)

- Open Swagger UI: https://personalized-travel-itenerary-planner.onrender.com/docs
- Show all available endpoints (health, me, trips CRUD, generate, regenerate, reorder, activities)
- Demonstrate the Authorize button for JWT auth
- Expand the POST /api/trips/generate endpoint to show the request schema

Part 7: Database & Security (2 minutes)

- Briefly show the Supabase dashboard (or explain)
- Explain Row-Level Security policies
- Show that logging out and trying to access data fails with 401
- Demonstrate that different users cannot see each other's trips

---

Demo Environment

Aspect	Details
Browser	Chrome / Edge (latest)
Internet	Stable connection required (AI generation uses cloud APIs)
Accounts	Pre-created demo account with sample trips
Fallback	If Gemini API is slow, Groq fallback activates automatically

---

Demo Duration

Total: ~21 minutes (can be condensed to 10 minutes by showing pre-generated trips)
